

CONTRAIRE = High Milk, Type, Fat & UDC

When a genomic sire's proof information slowly increases over time, we take note. This is exactly what has happened with 566HO1310 CONTRAIRE. After the December 2019 Sire Summary, he is +1599 Milk, +2.43 Type, +2.32 UDC and +.13% Fat and +.05% Protein. This translate into +2733 GTPI, \$946 DWP\$ as well as \$887 Cheese Merit. His 342156 aAa also makes him unique.

CONTRAIRE is a full brother to our 566HO1310 CAUGHT MY EYE bull. His pedigree is a little different than most genomic sires. He is a Hotline son out of a "GP- 83" "VG-MS" Octobrfest that has over 36,300 Milk 1480F and 1090 P in her first lactation. The next seven dams are VG or EX with many GMD or DOM dams on the maternal side.
