

DONZINO - 615 aAa

It's not easy to find a 615 aAa genomic sire. Yet, 566HO1328 DONZINO fits this criteria. He is one of the very few 615 aAa genomic sires available. He is also in an elite group of being one of the few genomic sires that is at least +2825 GTPI and at least +2.18 UDC after the December 2020 Sire Summary. In case you need a few more convincing reasons to use DONZINO, maybe his BB Kappa Casein, +0.7 DPR and \$738 DWP\$ will help

An A2A2 sire, DONZINO is a Rio out of a GP-83 VG-MS Helix. The next eight maternal dams are VG or EX, with multiple GMD and DOM designations that traces back to the Dellia cow family. In the first three generations of DONZINO's pedigree, there is no Modesty, Montross or Mogul.
